# Elan<sup>®</sup> Control

For effective  
pathogen control

Elan<sup>®</sup>Control is a combination of alpha-monoglycerides of propionic (C3), butyric (C4), caprylic (C8) and capric (C10) acid. The mixture of glycerides derived from fatty acids of both short and medium chains in Elan<sup>®</sup>Control makes it well-suited to effectively overcome both Gram-negative and Gram-positive bacteria. This product is formulated to balance the gut flora and enhance the overall well-being of the gut, leading to improved animal performance. As a result, it is often used as a substitute for antibiotic growth promoters (AGPs).

“Elan<sup>®</sup>Control effectively controls a wide range of pathogens.”
